

OP1200

To celebrate SilverStone power supplies' popularity with extreme overclockers and computer enthusiasts, SilverStone today reports that an OP1200 powered overclocker last week has again regained the top scoring mark in 3DMark06, the world's most popular 3D benchmarking program. This feat has been a norm for SilverStone power supplies since June of 2005, in which they have powered overclockers ranked in the top five every week since then.
